

Senior Leadership Briefing
Post-Tropical Cyclone Harvey and Hurricane Irma
Tuesday, September 5, 2017 (5:00 a.m. EDT)
Executive Summary
Updates in Blue

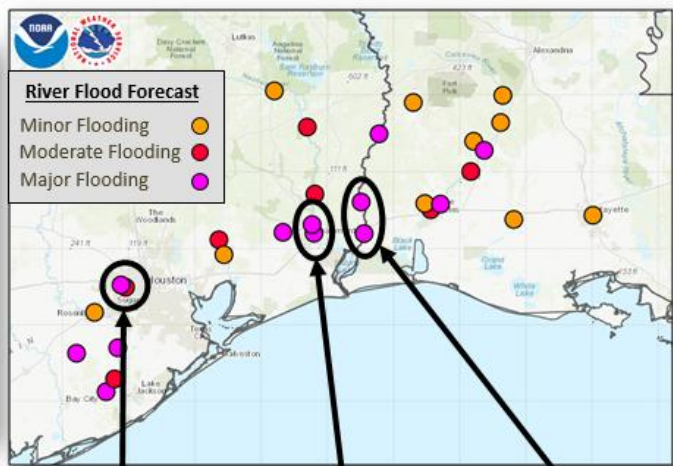

Overview:

FEMA is coordinating the interagency and multi-regional response to multiple events. FEMA is monitoring Post-Tropical Cyclone Harvey in the Northeast U.S. and Hurricane Irma in the Atlantic.

Current Situation:

Post Tropical Cyclone Harvey

Coastal sections of TX and southwest LA will see a heat index in mid-upper 90s today. This may result in heat-related illnesses for citizens without access to air-conditioning or cooling areas. There is a chance of showers and thunderstorms today and into Wednesday, but widespread heavy rainfall unlikely. Dry and cooler conditions will develop on Thursday and into late next week with max temperatures reaching only in the 80s. Peak river crests are expected to occur this weekend with a slow recession thereafter for upper TX and southwest LA coasts, including Houston and Beaumont. (NOAA Update, September 5, 2017, 5:00 a.m. EDT)

Buffalo Bayou
Major Flooding Persists;
Very Slow Recession

Sabine River
Above Major through
Mid- to Late Week

Neches River
Steady Recession but Above Record Levels through Mid-Week

Hurricane Irma

At 5:00 a.m. EDT, the eye of Major Hurricane Irma was located about 320 miles east of the Leeward Islands, moving west at 13 mph. This general motion is expected to continue today, followed by a turn toward the west-northwest tonight. The center of Irma will move near or over portions of the northern Leeward Islands Tuesday night and early Wednesday. Maximum sustained winds are 150 mph, Irma is a category 4 hurricane on the Saffir-Simpson Hurricane Wind Scale. Additional strengthening is forecast over the next 48 hours.

A hurricane Warning continues for the U.S. Virgin Islands and Puerto Rico. Hurricane conditions are expected across the U.S. Virgin Islands and Puerto Rico with strong tropical force winds likely. Rainfall accumulations between of 4 to 8 inches with isolated maximum amounts of 12 inches across the U.S. Virgin Islands and Puerto Rico. These rainfall amounts may cause life-threatening flash floods and mudslides. (NOAA Update, September 5, 2017, 5:00 a.m. EDT)
